# MediScript — Quick Reference

Pin this next to you. Golden rule: change the plain text, not the tags or the `{{ }}` / `{% ... %}` placeholders.

## I want to change... -> open this file

| Change | File |
|---|---|
| Colours, fonts, spacing | app/static/css/style.css (edit --pen, --mint, --amber, --coral) |
| Text on a page | app/templates/PORTAL/PAGE.html |
| Home page | app/templates/landing.html |
| Header/logo (all pages) | app/templates/base.html |
| Menus | app/templates/user/_nav.html · chemist/_nav.html |
| Matching strictness | app/core/config.py -> match_threshold (default 72) |
| Free-demo limits | app/api/guest_api.py -> FREE_UPLOADS / FREE_SEARCHES |
| News sources | app/services/news_service.py |
| Medicine info shown | app/services/medicine_info.py |
| Prices / savings | app/services/medicine_details.py |
| OCR key & settings | .env -> OCRSPACE_KEYS=your_key |

## Everyday commands

```
# run locally (auto-reloads on edits)
uvicorn app.main:app --reload      ->  http://127.0.0.1:8000

# after adding medicine data to data/datasets/
python scripts/build_medicine_db.py

# check nothing broke
python -m pytest
```

## Add your own medicines (fastest way)

| Step | Do this |
|---|---|
| 1 | Drop a .csv or .txt into data/datasets/ |
| 2 | CSV: any column named name / medicine / brand / composition is used. TXT: one name per line. |
| 3 | Run python scripts/build_medicine_db.py — it merges + de-duplicates automatically. |

**CAUTION** CSS/JS edits may need a hard refresh (Ctrl+F5). First app start is slow — it loads a big medicine list into memory. That's normal.

**NOTE** OCR is fixed to OCR.space Engine 3 by design — don't swap the OCR engine. You can improve everything that happens after the text is read.
